1. TRANSPORT

Requirementsforphysical assets in the medium and long term

TheBranch's requirements for road network in frastructure in the medium to long term is a multistage process that takes place annually. The process involves the use of the Branch's Pavement Management System, Gravel Road Management System, Bridge Management System, Traffic Counting System, Road Network Information System and Project Optimisation System. The results of these systems to gether with the results of various economic studies undertakent ode termine the extent to which transport in frastructure is impacting on the economic growth within particular areas, serve as input to a consultative process involving all spheres of government and community for ums. The projects and investments required to preserve and extend the road network area naly sed over at least a 20 year period. In addition to the above process, unsurfaced access roads serving communities are identified separately for upgrading to surfaced standards.

Appropriatenessoftheexistingassets

The appropriateness of the road network infrastructure is assessed in relation to the present and projected future traffic demand and according to Branch policy on standards of roughness and geometrics.

Needforne wphysicalassets

Needsstudiesfornewroadinfrastructureareconductedwhenappropriate (e.g., overloaded infrastructure, newindustrial and agricultural development) and the World Bank HDM4 program is used for the economic evaluation of these projects.

Developingstrategiesformaintainingtheappropriatelevelofservice

MaintenancestrategiesareanoutputfromthePavementManagementSystem,GravelRoad ManagementSystem,BridgeManagementSystemandProjectOptimisationSystem.These strategiesare modifiedwiththeinputfromtheDistrictMunicipalities'politicalofficebearersand officials,bothofwhomserveannuallyonpanelsthatreviewthemaintenancestrategies.The strategiesaredesignedtobeoptimalfortheroadnetworkasawholeand thusminimisetotal transportcostsandlossofassetvalueunderconstrainedbudgetconditions.Theyarebasedon Branchroughnessstandardsandminimummaintenanceactionsforpreservationoftheroad.

Disposalofredundant, obsolete and unserviceable as sets

Redundantroadsaredeproclaimed. Obsolete and unserviceable roadsare identified by the systems mentioned above and rehabilitated or reconstructed to current Branch standards.

Developingstrategiestomeettheneeds

A5 -yearprogrammeofprojectsis keptcontinuouslyuptodate. The funding of the programme is from provincial sources and any other special funding sources (e.g., infrastructure grants, etc.). For at least the last decade the needs have far exceeded the funds available with the consequential deterior at ion of the network as a whole and the collapse of individual roads. The Branchhasmoved into an ewphase of infrastructure preservation where most work is related to emergency repair and rehabilitation of roads. Without a sustained in jectio no ffunds over the next 20 years the road network will deterior at eto alevel which will make sustainable economic development unattainable in the Western Cape.

2.PUBLICWORKS

Requirementsforphysical assets in the medium and long term

Therequirements forphysicalinfrastructureinthemediumtolongtermisbasedupontheneeds ofindividualclientdepartmentsandforwardedtotheBranchonanannualbasis. These requirements should be based on the medium tolong -terminfrastructure planning of the departments. The projects and investments required to preserve and extend the physical infrastructure are based upon the requirements as determined by the client departments.

Appropriatenessoftheexistingassets

The appropriateness of the physical infrastructure of the Province is assessed in relation to the present and projected future utilisation demand of client departments and according to set to make a most and a respective for the province is assessed in relation to the present and according to set to the province is assessed in relation to the present and according to set to the province is assessed in relation to the present and according to set to the present and according to the present according to the presen

Needfornewphysicalassets

Needsstudiesfor newphysicalinfrastructurearetheresponsibilityofclientdepartments, and are conducted when appropriate (e.g., based upon changing demographics, population projections, health statistics, etc.). These needs are then forwarded to the Branch, where tec hnical (engineering, architecture, quantity surveying, etc.) as well as financial considerations are used for the economic evaluation of these projects.

Developingstrategiesformaintainingtheappropriatelevelofservice

Maintenancestrategiesbasedup ontheBuildingAuditProgram,whichiscomprehensive evaluationofthephysicalstateoftheentireProvincialpropertyportfolio.Thesestrategiesare designedtoprotecttheintegrityoftheportfolioandtoadheretotheminimumsafety requirementsas prescribedbytheOccupationalHealthandSafetyAct.Duetothelimited availablefundingitisimpossibletoproperlymaintaintheprovincialpropertyportfolio,andthe Branchisconstantlyseekingalternativemethodsoffundingcapitalinfrastructurea nd maintenanceprograms(eg.Public -privatepartnerships,assetswaps,proceedsfromthedisposal ofexcessproperties,etc.).

Disposalofredundant, obsolete and unserviceable assets

Redundant, obsolete and unserviceable physical assets are identified and rehabilitated or reconstructed to suit current client needs. Alternatively it is disposed of byway of a competitive tendering process.
