VCT stands for Voluntary Counselling and Testing. It is a process that is followed when a person wants to find out if they are infected with HIV.

- Voluntary means that a person decides on their own whether or not to have the test.
- A person will have the chance to discuss the test with a trained counsellor.
- The test is an accurate scientific test to show if a person has been infected with HIV.
- The test is usually done on a person's blood. Most clinics use a rapid test, which means that the test results are available after about 20 minutes.

VCT e emetse *Voluntary Counselling and Testing* (Ho Eletswa le ho etswa Teko ka Boithaopo). Ena ke tshebetso e latelwang ha motho a batla ho tseba hore na o tshwaeditswe ke kokwanahloko ya HIV.

- Voluntary – (Boithaopo) e bolela hore motho o etsa qeto ka boyena hore na o batla ho etswa teko.
- Motho o tla fumana monyetla wa ho buisana ka teko eo le moeletsi ya rupellelsweng.
- Teko ena ke hlahlobo e nepahetseng e sebedisang mokgwa wa saense bakeng sa ho bontsha hore motho o tshwaeditswe ke kokwanahloko ya HIV.
- Teko ena hangata e etswa mading a motho. Ditliliniki tse ngata di sebedisa teko e potlakileng, ho bolelang hore diphetho tsa diteko di fumaneha ka mora metsotso e 20.

Igama elithi: VCT lisho u-Voluntary Counselling and Testing okusho ukuhlolwa ngokuzithandela kwakho. Lena yinqubo elandelwa ngumuntu uma efuna ukuthola ukuthi ngabe unalo yini igciwane le-HIV noma cha.

- Ukuvolontiya (ukuzinikela ngokuzithandela kwakho) ukuthi uhlolwe kusho ukuthi umuntu uzithathela ngokwakhe isinqumo sokuthi ngabe ufuna ukuhlolwa yini noma cha.
- Umuntu uzothola ithuba lokuxoxisana ngokuhlolwa nomeluleki oqeqeshiwe.
- Uhlolo luwuhlolo oluqondane nciamashi ngokwesayense, lubonisa ukuthi ngabe umuntu unalo yini igciwane le-HIV nomaakanalo.
- Uhlolo luwamise ukwenziwa egazini lomuntu. Amakliniki amanangi asebenzisa uhlolo olubizwa ngokuthi yi-rapid, okusho ukuthi imiphumela itholakala masishane, ngemuva kwemizuzu engu-20.

VBT staan vir Vrywillige Berading en Toetsing. Dit is 'n proses wat gevolg word as iemand wil uitvind of hulle met MIV besmet is.

- Vrywillig beteken dat 'n persoon self besluit om hulle te laat toets of nie.
- Elkeen het die kans om die toets met 'n opgeleide berader te bespreek.
- Die toets is 'n akkurate wetenskaplike toets om te wys of 'n persoon met MIV besmet is.
- Die toets word gewoonlik op 'n persoon se bloed gedoen. Die meeste klinieke gebruik 'n vinnige toets, wat beteken dat die toetsresultate binne omstreng 20 minute bekend is.

VCT is **confidential**, which means that what is spoken about in the counselling sessions and the results of the test are not going to be discussed with anyone else.

The results of the test are given to the person in private, and it is against the law to pass a person's HIV test results to another person without permission.

VCT e etswa sephiring, ho bolelang hore eng kapa eng eo ho builweng ka yona ka nako ya dikeletso ekasitana le diphetho tsa teko di ke ke tsa bolellwa motho ofe kapa ofe.

Diphetho tsa diteko di fuwa motho moo ba bang ba sa boneng teng, mme ke tlolo ya molao ho fetisetsa diphetho tsa diteko tsa HIV tsa motho ho motho e mong hape ntlo le tumello.

Uhlolo Iwe-VCT **Iuyimfihi**, okusho ukuthi umeluleki ngeke axoxisana nabanye abantu ngakho ngesikhathi sezeluleko (counselling) kanye nemiphumela yohlolo, ngeke yatshelwa omunye umuntu.

Imiphumela yohlolo inikezwa umuntu ngendielo eyimfihi, kanti futhi kuphikisana nomthetho ukunikeza imiphumela yohlolo Iwegciwane le-HIV komunye umuntu ngaphandle kwemvume yakhe.

VBT is **vertroulik**, wat beteken dat dit wat in die beradingssessies bespreek word en die toetsresultate met niemand anders bespreek word nie.

Die toetsresultate word privaat aan die persoon gegee, en dis teen die wet om iemand se MIV toetsresultate sonder toestemming aan iemand anders te gee.

There are three main steps in VCT:

- Pre-test counselling where questions about HIV/AIDS and the test are discussed with the counsellor.
- When a person decides to have an HIV test, they need to sign a consent form.
- After the test, the counsellor gives the results in a post-test counselling session.

Ho na le mehato e meraro e meholo boemong bona ba VCT:

- Dikeletso tsa pele ho teko moo ho buuwang le moeletsi ka ditaba tse mabapi le HIV/AIDS le teko.
- Ha motho a etsa qeto ya ho etswa teko ya HIV, o tla tshwanelo ho saena foromo ya turmelo.
- Ka mora teko, moeletsi o tla mo neha diphetho tsa teko kopanong ya boletsi e tla tla ka mora diteko.

Kukhona amanyathelo amathathu maqondana nokuhlolwa ngokuzithandela kwakho:

- Ukuqala uthole ukwelulekwa ngaphambi kokuba uhlolwe (pre-test counselling) lapho uchazelwa khona nge-HIV/AIDS, uchazelwa ngumeluleki.
- Lapho umuntu ethatha isinqumo sokuhlelwa ukuthi unalo yini igciwane le-HIV noma cha, kudingeka asayine ifomu lokuvuma.
- Ngemuva kohiolo, umeluleki (counsellor) unikeza ngemiphumela kanye nokweluleka umuntu obehlolwa.

Daar is drie hoofstappe in VBT:

- Voor-toets berading, waar vrae oor MIV/VIGS en die toets met die berader bespreek word.
 - As 'n persoon besluit om die MIV-toets te laat doen, moet hulle 'n toestemmingsvorm teken.
 - Na die toets gee die berader die resultate in 'n na-toets beradingssessie.

- The HIV test cannot tell when a person was infected.
- The HIV test cannot tell how the person was infected, or who the infection was from.
- The HIV test cannot tell whether a person has AIDS or not. Another test can be done to test whether a person has AIDS.

- Teko ya HIV e ke ke ya bolela hore motho o tshwaeditswe neng.
- Teko ya HIV e ke ke ya bolela ka moo motho a tshwaeditsweng ka teng, kapa tshwaetso e hlaha ho mang.
- Teko ya HIV e ke ke ya bolela hore na motho o na le lefu la AIDS kapa tjhe. Teko e nngwe e ka etswa ho bona hore na motho o na le lefu la AIDS.

- Uhlolo lokuthi ngabe umuntu unayo yini iHIV noma cha, ayichazi ukuthi ngabe umuntu wayithola nini iHIV.
- Uhlolo lwe-HIV aluchazi ukuthi ngabe umuntu yamngena kanjani iHIV, nokuthi ngubani owathelela lo muntu nge-HIV.
- Uhlolo lwe-HIV aluchazi ukuthi ngabe umuntu unayo yini iAIDS noma akakabi nayo. Olunye uhlolo lungenziwa ukubona ukuthi umuntu usenayo yini iAIDS.

- Die MIV-toets kan nie bepaal wanneer die persoon besmet is nie.
- Die MIV-toets kan nie bepaal hoe die persoon besmet is, of deur wie nie.
- Die MIV-toets kan nie bepaal of iemand VIGS het of nie. Nog 'n toets kan gedoen word om te toets of iemand VIGS het.

A counsellor can provide ongoing support, and also refer an HIV positive person to other people or organisations where they can get help.

Moeletsi a ka fana ka tshehetso e tswellang, mme hape a romele motho ya nang le kokwanahloko ya HIV bathong ba bang kapa mekgatlong e meng moo a ka fumanang thuso teng.

Umeluleki (counsellor) angasekela lomuntu njalo, kanti futhi angathumela lo muntu kwabanye abantu noma ezinye izinhlangoano lapho angathola khona ukusizwa.

'n Berader kan deurlopende ondersteuning gee, en kan ook 'n MIV-positiewe persoon na ander mense of organisasies verwys waar hulle hulp kan kry.
